

* Handling Date and Time Variables:- (Day-34)

→ To handle date and time variables, convert them to datetime format, extract meaningful components (year, month, hour, day of week), engineer useful time-based features, encode/scale them properly, and drop the original date column if needed. Cyclical features should be handled with sine/cosine transformation.

→ So, Date

08:05:45
↓ ↓ ↓
Hour Minute Second.

→ Aa jeh sub information hoy tamara ek column ma e bau j helpful hoi like agar tame koi expense tracker app. banavo cho to ema date no bau moto role thei jai che like user no expense kya vadhore thei che like weekends ma keh pachi week days ma. same for time par.
